

Alex Morgan

STAFF SOFTWARE ENGINEER — PLATFORM INFRASTRUCTURE

<https://alexmorgan.dev>

Software engineer with 10+ years building distributed systems, microservices, and data pipelines at scale. Deep expertise in Kubernetes, AWS, and Go; defined SLOs/SLIs, drove a 40% infrastructure cost reduction, and led cross-functional platform teams of up to 10 engineers. Proven track record of mentoring engineers, championing reliability, and shipping systems serving 2M+ users.

PROFESSIONAL SKILLS

- ◆ Go
- ◆ Python
- ◆ Kubernetes
- ◆ AWS (EKS, Spot, Autoscaling)
- ◆ gRPC
- ◆ GraphQL
- ◆ Terraform
- ◆ Kafka
- ◆ Flink
- ◆ Prometheus
- ◆ Grafana
- ◆ PostgreSQL
- ◆ Redis
- ◆ Docker
- ◆ TypeScript
- ◆ Snowflake

SOFT SKILLS

- ◆ Technical leadership
- ◆ Cross-functional collaboration
- ◆ Mentoring
- ◆ Incident response
- ◆ Stakeholder management

LEADERSHIP & IMPACT

Open Source Contributions

17 merged PRs across *etcd* and *gRPC-Go* covering distributed systems correctness and performance.

Tech Mentorship — CodePath

Volunteer mentor coaching 3 cohorts of bootcamp graduates on system design and career development.

EXPERIENCE

◆ Luminary Cloud | 2021–Present Staff Software Engineer

- Architected microservices platform handling 80K req/s with 99.95% uptime, serving 2M+ active users globally.
- Cut infrastructure spend by 40% (\$2M/year) by migrating 60+ services from bare-metal to Kubernetes on AWS EKS, leveraging spot instances and autoscaling.
- Defined and owned SLOs for 12 critical services; introduced SLI dashboards in Grafana, reducing MTTR by 35%.
- Led a 10-person platform team to consolidate 4 legacy CI/CD systems into a unified GitOps pipeline, cutting deploy times from 45 min to under 8 min.
- Mentored 6 junior engineers; 4 promoted within 18 months.

◆ Apex Analytics | 2018–2021 Senior Software Engineer

- Built a real-time event streaming pipeline (Apache Kafka + Flink) processing 500M events/day; improved end-to-end latency 3x (900ms → 300ms).
- Owned and iterated on public REST and GraphQL APIs consumed by 45 external partners.
- Introduced column-level encryption and row-level security, passing SOC 2 Type II audit with zero findings.

◆ Qubit Systems | 2015–2018 Software Engineer

- Developed backend services in Go for a B2B SaaS platform with 10,000 paying customers.
- Improved database query performance by 4x through schema redesign and query optimisation across a 200GB PostgreSQL cluster.
- Contributed to open-source distributed systems projects: merged 12 PRs into *etcd* and 5 into *gRPC-Go*.

EDUCATION

University of Texas at Austin
2015

B.S. Computer Science

GPA: 3.8/4.0 | Honors Thesis: "Consistent Hashing in Distributed Key-Value Stores"
